

## Getting Started With MongoDB

MongoDB (its name is derived from “humongous”) is an open-source, document-oriented, NoSQL database that provides high performance, high availability, and automatic scaling. It has become the leader in non-relational databases as Fortune 500 companies have been migrating to MongoDB among others.

This presentation will be an introduction and overview of MongoDB. It will also demonstrate some basic CRUD operations (with some “mapping” to MySQL) on working MongoDB databases.
